

## Nickel Metal Hydride Button Cell Battery Packs

Varta nickel metal hydride button cells can be assembled in various ways with an assortment of terminals available. On this page our step by step guide to creating an assembly to suit your application or to replace an existing battery.

Please note the most common memory backup layouts are listed individually on our web page for NiMH Button Cell Batteries. In addition many cordless telephone batteries are manufactured from NiMH button cells and can be found on the Cordless Telephone Batteries web page.

NiMH Button cell assemblies			
<p>Select the cell type, number of cells &amp; assembly layout you require.</p> <p>For example you may wish to use cell type V250H in a column of 3 cells</p> <p>The part number is 3/V250H. Alternatively you may require a battery using the same cells but in 3 columns of 4 cells. The part number is 3x4/V250H. Once you've decided your battery pack configuration proceed to the terminations below to select the termination required.</p>	 <p>2 columns of 3 cells Part No 2x3/V***H</p>	 <p>1 column of 5 cells Part No 5/V***H</p>	 <p>3 columns of 4 cells Part No 3x4/V***H</p>
	 <p>3 columns of 2 cells Part No 3x2/V***H (Triangle pack)</p>	 <p>1 row of 3 cells Part No 3/V***H (Flat pack)</p>	 <p>2 rows of 3 columns of 4 cells Part No 2x3x4/V***H</p>
<p>The NiMH button cells can be assembled in many configurations. If you have difficulty naming the assembly you require email or fax a picture or hand drawing of what you require or alternatively send us your sample. One of our sales staff will contact you with the information you require.</p>			

NiMH Button cell terminations			
<p>NiMH button cell batteries may be terminated in various forms for surface or through whole printed circuit board (PCB) mounting. Select the termination you require and add it to the end of the part number generated from the assembly layout required. For example you require a 5/V150H with strip tags the part number is exactly that:</p> <p>5/V150H with strip tags.</p> <p>Alternatively a 3/V80H with a double PCB pin 8mm wide on the positive terminal and a single PCB pin on the negative terminal the part number is:</p> <p>3/V80H-PCB D+8mm S-</p>	 <p>Strip tags</p>	 <p>Ring tags (V250H &amp; higher capacity models only)</p>	 <p>Single PCB pin</p>
 <p>Female Male</p> <p>Snap Fasteners – standard or miniature</p>	 <p>Double PCB pin 8mm</p>	 <p>Double PCB pin 10mm</p>	 <p>Flying Leads</p>
<p>Various leads with connectors are available for termination on NiMH button cell batteries. Please go to our web page for connectors to view types available.</p>			

The finished battery pack - examples			
 <p>3/V40H-PCB S+S-</p>	 <p>3/V80H flat pack with strip tags</p>	 <p>3/V450HR with connector B</p>	 <p>4/V150H-PCB D+10mm S-</p>
