

## CR9V/P

Lithium Manganese  
Dioxide (Li-MnO<sub>2</sub>) Batteries

### ELECTRICAL CHARACTERISTICS

(typical values for cells stored for one year or less, at 23°C)

● Nominal capacity	1200mAh
At 900Ω (9.0 mA), +23°C, 5.4V cut off. The capacity restored by the cell varies according to current drain, temperature and cut off voltage.	
● Nominal voltage	9.0V
● Maximum recommended continuous current	200mA
(To get 50% of the nominal capacity at +25°C with 5.4V cut off. Higher currents possible. Consult EVE.)	
● Maximum pulse current capability	400mA
Pulse capability varies according to pulse characteristics (frequency and duration), temperature, cell history (storage conditions prior to) usage and the application's acceptable minimum voltage.	
● Storage (Recommended)	30°C max
(For more severe condition consult EVE.)	
● Operating temperature range	-40°C/+85°C
(Operation at temperature different from ambient may lead to reduced capacity and lower voltage plate readings.)	

#### REMARK :

EVE CR9V battery with Printed Circuit Board (PCB) for safety design, the PCB include three diodes and one polyswitch. The three diodes can well protect from abnormal charging currents or forced discharge during use, and the polyswitch can limit the discharging current in abnormal use, such as short circuit or larger charging current.

#### CAUTION:

Risk of fire and burns. Do not recharge, disassemble, heat above 100°C or incinerate. Do not mix fresh batteries with used lithium batteries or other battery types.

#### TRANSPORTATION:

For a complete description of transportation regulations and definitions of the transportation classifications "Excepted" and "Class 9" refer to the EVE web site at [www.evebattery.com](http://www.evebattery.com)
